- Organization and time management skills
- Critical thinking
- Creativity
- Passion for learning
- Teamworker
- Receptive to feedback

LANGUAGES

- English - B2
- Norwegian Bokmål - A2
- Spanish - Native

PROFILE

I am a frontend developer passionate about technology and web development. I have experience in the creation of websites using JavaScript, HTML5, CSS3, TailwindCSS and React.js. I work mainly with frontend technologies, but I also have knowledge in backend and REST API development using Python, Django and relational databases such as PostgreSQL, MySQL, and SQLite3.

I am a very curious person who enjoys learning something new everyday, with atention to detail, self-taught and organized. I'm looking to take advantage of my analytical skills from my previous career background in the creation of valuable and intuitive web apps that allow users to have a better interaction with the software created, in a challenging work environment that allows me to grow on a daily basis as a web developer.

PROJECTS

Inventory and Sales Management App
May 2023 - Present

- I am currently working on an Inventory and Sales Management App, utilizing React.js, Redux, and TailwindCSS for the frontend, along with Django for the backend.
- The project showcases my progress as a web developer, demonstrating my commitment to learning and applying modern web development technologies, and continually improving my skills to deliver valuable applications.
- The app aims to provide basic inventory control, sales tracking, and financial management functionalities to assist businesses in their day-to-day operations.

EDUCATION

Associate's Degree in Software Analysis and Development

Servicio Nacional de Aprendizaje

Sep 2023 - Present

Bachelor's Degree in Civil Engineering

Universidad del Cauca

Feb 2014 - Nov 2020

HOBBIES

- Learning languages
- Listening to music
- Meeting new people and cultures
- Working out
- TV Series
- Reading articles on the internet
- Watching YouTube videos
- Traveling

Polls Website

Apr2023

- This project was developed using Django REST Framework for the backend and React.js, Redux and TailwindCSS for the frontend.
- This website allows users to answer interesting questions on different topics, organized by category and shows the votes for each option after voting.

Camps Experiences Website

Mar2023

- This project was developed using JavaScript to show the experiences dynamically by manipulating DOM content.
- The layout is made using HTML5 and TailwindCSS to style the site and make a responsive design.
- This website allows users to read and comment on the experiences of students who went to summer camps in the United States. They can also read a guide, ask questions, or share their own stories.

Countries Info Website

Mar 2023

- This project was developed using JavaScript to create the cards for each country dynamically by manipulating DOM content. The information is obtained either by making requests to an API REST or using a JS Object that contains the data.
- The layout is made using HTML5 and TailwindCSS to style the site and make a responsive design.

Portfolio Page

Jun 2022

- Portfolio site created using JavaScript to manage events in the page, display the projects dynamically by manipulating DOM content and some aspects of responsiveness.
- The layout is made using HTML5 and CSS3 to style and make a responsive design.
